

For semi-auto welding! For robot welding!

CeramiShield

You cannot ignore the difference from traditional product.
Please try now!

You will see significant effect by ceramic coating!

12 Cans per Box

- *Spray at the end of the torch nozzle of a semi-auto welder.
- *CeramiShield protects chips and nozzles by ceramic coating.
- *You can save time for spatter removal, so the productivity is definitely increased and welding precision is stabilized.
- *CeramiShield has long life without degradation.
- *One CeramiShielded can be used for 70 times; that means 70 days.
- *You will surprise when comparing with traditional anti-spatter agents; sprays and canned jelly.
- *The best application way is; shake 30 seconds, then spray 5 seconds from 30 centimeters away.

Customers' Comments

- "I tried various anti-spatter products and did not see good one, except this CeramiShield. This is the best comparing with traditional agents like sprays and canned jelly"
- "Even though spatter is stuck, it comes off so easily by patting the end of torch"
- "Nozzles and chips stand a lot longer since spatter does not stick. I can save time to exchange those too"
- "We have many welders and all of them give rave review. We cannot weld without CeramiShield"
- "When using with Robot Welders, we can save welding time a lot due to less spatter stuck"
- "By spraying once in the morning, the effect continues for whole day, so we can see saving the running cost clearly"

When just welding without CeramiShield

When welding after spraying CeramiShield

Huge difference of spatter attachment

Save Work Time! Cost Saving!
Revolution of Welding!!
